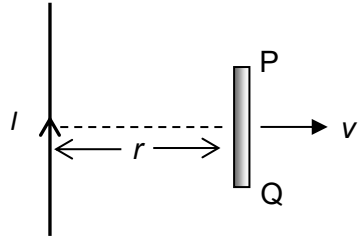
22 The diagram shows a wire carrying a current I and a straight conductor PQ is placed on the same vertical plane as the wire. PQ is moved at constant speed v away from the wire.



How will the magnitude of the induced e.m.f. in PQ vary and which end will be at a higher potential?

	magnitude of induced e.m.f.	end at higher potential
A	decrease	P
B	decrease	Q
C	increase	P
D	increase	Q
