

- 21** A mobile phone battery is charged by connecting it to a constant potential difference of 5.0V.
After a time of 1.0 hour, the initial current of 0.50 A slowly decreases to zero, as shown.

What is the best estimate of the energy transferred to the battery during the time of 2.0 hours shown in the graph?

- A** 2700 J **B** 9000 J **C** 14 000J **D** 18 000J
