

- 2 (a) State the first law of thermodynamics.

.....
 [1]

- (b) An ideal gas is placed in an insulated cylinder as shown in Fig. 2.1.

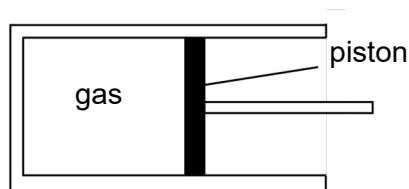

Fig 2.1

Initially, its pressure is 1.04×10^5 Pa and its temperature is 314 K. 28.5 J of heat is then supplied to the gas, causing its volume to increase from 2.90×10^{-4} m³ to 4.00×10^{-4} m³ while keeping its pressure constant.

- (i) Calculate the work done on the gas.

work done on gas = J [2]

- (ii) Show that the change in internal energy of the gas is 17.1 J.

[1]

- (iii) Calculate the new temperature of the gas.

new temperature = K [2]

- (iv) Calculate the ratio of the final root-mean-square (r.m.s.) speed to the original r.m.s. speed of the molecules.

ratio = [2]
