

- 5 An X-ray photon of wavelength  $965.0 \times 10^{-12} \text{ m}$  collides elastically with a stationary electron.

The photon is deflected through an angle of  $75^\circ$  and has a wavelength of  $966.8 \times 10^{-12} \text{ m}$ .  
Given that the momentum carried by the deflected electron is  $8.362 \times 10^{-25} \text{ N s}$ .

What is the deflection angle  $\alpha$  of the electron?

- A**  $12^\circ$                       **B**  $38^\circ$                       **C**  $52^\circ$                       **D**  $78^\circ$
