14 C

Intensity at dish from antenna I = $\dfrac{P_{antenna}}{4\pi d^2}$

Power received = I A_{dish}

$$= \frac{P_{antenna}}{4\pi d^2}\pi r_{dish}^2$$

$$= \frac{240}{4\pi(750)^2}\pi(1.5)^2$$

$$= 2.4 \times 10^{-4}\ \text{W}$$
