1 Which of the following is considered as a random error?

A Error as a result of using g = 10 m s^{-2}, instead of g = 9.81 m s^{-2}.

B Error in measuring the time duration of a 100 m sprint using a stopwatch.

C Error due to a stopwatch running too fast.

D Zero error of a measuring instrument.

Ans: B
Options A, C and D will cause values to be consistently biased (either always larger or always smaller) and hence causes systematic errors

2 A tennis ball is thrown vertically upward. It hits the ceiling before it falls down. Assuming the
