		At the 5th harmonic, the wavelength is 0.4 m. Option D is correct.
20	**B**	Using Rayleigh's criterion for resolution: $\theta = \dfrac{\lambda}{b}$ For small angle, θ = sin θ = tan θ $(700 \times 10^{-9}) / (30 \times 10^{-3}) = x / 5.0$ $x = 1.2 \times 10^{-4}$ m = 0.12 mm
