21 A high potential is applied between the electrodes of a hydrogen discharge tube so that the gas is ionised. Electrons then move towards the positive electrode and protons towards the negative electrode. In each second, 7×10^{18} electrons and 2×10^{18} protons pass a cross section of the tube.

The current flowing in the discharge tube is

A 0.32 A **B** 0.80 A **C** 1.12 A **D** 1.44 A

22 Six 5 Ω resistors are connected to a 3 V cell of negligible internal resistance, as shown in the
