24	**C**	The 2.0 Ω and 4.0 Ω resistors are in series. So effective resistance is 6.0 Ω. This 6.0 Ω resistor is parallel to the given 6.0 Ω, which results in an effective resistance of 3.0 Ω. This 3.0 Ω resistor is in series with the given 3.0 Ω. Hence, 15 V is shared equally across both 3.0 Ω resistors. Hence 7.5 V appears across the effective resistance of 3.0 Ω which means 7.5 V appears across the given 6.0 Ω resistor.
25	B	Potential of
