		in the formula.
23	**B**	P.d. across 5.0 Ω resistor is proportional to the balanced length, i.e. 5.0 Ω = k (12.5 cm) Resistor across Q and R is 10.0 Ω. Hence the balanced length should be doubled that of 5.0 Ω, or 25.0 cm.

		Resistor across Q and S is (10.0 + 15.0 =) 25.0 Ω. Hence the balanced length should be 5 times that of 5.0 Ω, or 62.5 cm. Resistor across P and R is (5.00 + 10.0 =) 15.0 Ω. Hence the balanced length should be 3 times that of 5.0 Ω, or 37.5 cm.
24	**A**	Magnetic force = BIL
