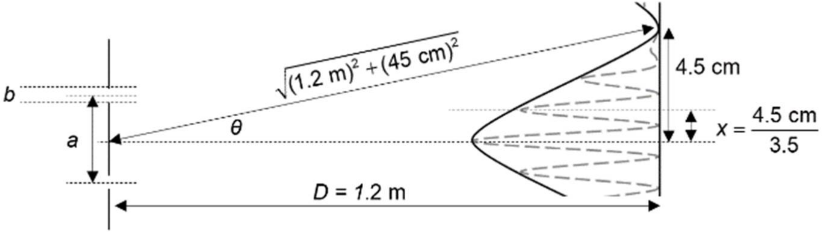
Resultant amplitude x = $\sqrt{(2A^2 - 2A^2\cos 120^\circ)} = \sqrt{3}\,A$

17 **Ans: D**



$$\sin\theta = \frac{\lambda}{b} \text{ and } \lambda = \frac{ax}{D}$$

$$\sin\theta = \frac{ax}{bD}$$

$$\frac{b}{a} = \frac{x}{D\sin\theta} = \frac{4.5\times10^{-2} \div 3.5}{(1.2)\dfrac{4.5\times10^{-2}}{\sqrt{\left(4.5\times10^{-2}\right)^2 + 1.2^2}}} = 0.29$$

18 **Ans: A**
