		$\theta = 36°$
2	**D**	Option A is incorrect. Using $v^2 = u^2 + 2as$, Acceleration , $a = \dfrac{v^2 - u^2}{2s}$ $= \dfrac{70^2 - 50^2}{2(432)}$ $= 2.78\ \text{m s}^{-2}$ Option B is incorrect. Using $v = u + at$, Time, $t = \dfrac{v-u}{a}$ $= \dfrac{70-50}{2.778}$ $= 7.2\ \text{s}$ Option C is incorrect. Using $v = u + at$, Time, $t = \dfrac{v-u}{a}$ $= \dfrac{70-55}{2.778}$

Qn	Ans	Suggested Solution
		$= 5.4\text{ s}$ Option D is correct. Using $v^2 = u^2 + 2as$, $s = \dfrac{v^2 - u^2}{2a}$ $= \dfrac{70^2 - 60^2}{2(2.778)}$ $= 234\text{ m}$
8	C	By Newton's second law
