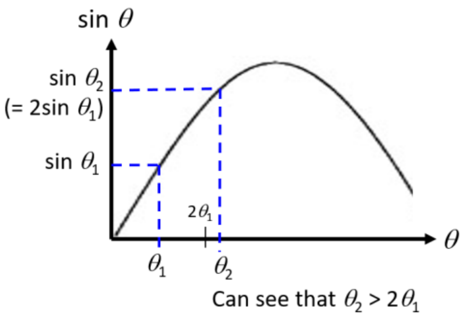
could be more than 1 wavelength.

16. Ans: C

For the 1st order: $\sin\theta_1 = \dfrac{\lambda}{d}$

For the 2nd order: $\sin\theta_2 = \dfrac{2\lambda}{d} = 2\sin\theta_1$



On a sine curve, locate the positions of sin θ_1 and 2sin θ_1.

Judging by the shape of the sine curve, we can see that $\theta_2 > 2\theta_1$.

Also, the 1st order is observed to be brighter than the 2nd order.

17. Ans: C
