		Hence, 9 *I*
16	**D**	$d \sin\theta = n\lambda$, $\sin 90^{o} = 1$ $(1 \times 10^{5}) / 500 = n\,(600 \times 10^{-9})$ n = 3 Total number of fringes = 3 + 1 + 3 = 7
17	**B**	Using Rayleigh's criterion for resolution: $\theta = \frac{\lambda}{b}$
