22 **Ans: B**

At **P**, B_1 due to $I_1 = \frac{\mu_0}{2\pi}\left(\frac{I_1}{x}\right)$ downwards but B_2 due to $I_2 = \frac{\mu_0}{2\pi}\left(\frac{I_2}{l-x}\right)$ upwards

Since $I_1 > I_2$, so net $B = B_1 - B_2$.
