		$v = \sqrt{(rg)}$
9	**D**	Kepler's Third Law: General expression is $T^2 = (4\pi^2 / GM)\, r^3$ Using symbols in this question, we have $T^2 = (4\pi^2 / GM)\,(r + h)^3$ But, $g = GM / r^2$ Thus, $T^2 = (4\pi^2 / g\, r^2)\,(r + h)^3$
10	**D**	When separation r is doubled, force F decreases by 4 times
