across thermistor is increased or resistance R_3 is reduced.

22 **B** $F_B - mg = ma$

$BIL\sin\theta - mg = ma$

$0.040 \times I \times 0.30 \times \sin 60^o - (0.0040 \times 9.81) = 0.0040 \times 2.0$

$I = 4.5\ A$

23 **D** Current in Y is doubled $\Rightarrow$ B_Y is doubled. The force F is doubled for both wires too, as
