		mode). The wavelength of the sound is equivalent to 2L. Only Option C gives us the wavelength of 2L.
18	B	$\theta = \frac{\lambda}{a} = \frac{550\times10^{-9}}{2.0\times10^{-3}} = 0.000275$ rad distance between the towers = $11 \times 10^{3} \times 0.000275 = 3.0$ m
19	A	0 because no change in electric potential
20	C
