		At Q, it experiences weight and drag force but in opposite direction.
3	**B**	$U_w + U_m = W$ $\rho_w V_w\, g + \rho_m V_m\, g = \rho_n\, V_n\, g = \rho_n\, (V_w + V_m)\, g$ $1000\, V_w + 13600\, V_m = 7900\, (V_w + V_m)$ $5700\, V_m = 6900\, Vw$ $V_w / V_m = 57/69 =$ **0.826**
4	**A**	The pair of action and reaction forces (Newton's third law) must act on ***separate*** bodies
