		(2)/(1) and solve to get $x = 5.0$ m
4	A	After collision, the kinetic energy of the ball is reduced, and the ball will take a longer time to travel YZ as compared to before collision. The slope remains unchanged, therefore the acceleration of the ball on the slope before collision = acceleration of the ball on the slope after collision and hence the gradient of speed-time graph for the first part and last part of graph should be the same.
5	D	By Newton's 3rd Law, the 2 forces are an action-reaction pair.
