		Resultant = $(12.3^2 + 7.7^2)^{1/2}$ = 14.5 m
2	D	Velocity is the gradient of the Displacement time graph.
3	D	Gradient of displacement time graph is velocity, hence option A, B and C are incorrect. Since displacement decreases after 2.5s, option D is true.
4	C	Net force on trailer = 600 – 200 = 400 N Hence acceleration on trailer = 400/400 = 1 m s^{-2}
