3	D	Gradient of displacement-time graph is velocity, hence option A, B and C are incorrect. Since displacement decreases after 2.5s, option D is true.
4	C	Net force on trailer = 600 – 200 = 400 N Hence acceleration on trailer = 400/400 = 1 m s^{-2} Net force on car = ma = 1200 x 1 = 1200 N
5	C	Relative speed of approach: $u_1 - u_2 = v_2 - v_1 = 6 - (-1) = 7$. Only B and C has $v_2 - v_1 = 7$
