4	**(a)**	**(i)**	$f = \dfrac{1}{4 \times 10^{-3}} = 250\ \text{Hz}$	B1
		(ii)	$\lambda = 300 \times 4 \times 10^{-3} = 1.2\ \text{m}$ (allow ecf)	B1
	(b)	**(i)**	Correct labelling of positions of C and R	B1
		(ii)	Distance between C and adjcent R = half a wavelength calculated in (a)(ii)	B1
	(c)		oscillate about a fixed position	B1
			displacement parallel to wave propagation (left – right direction)	B1
			250 oscillations in 1 second or equivalent	B1
