		$N = mg/2$
11	**D**	*By conservation of energy,* $KE_i + GPE_i = Ke_f + GPE_f$ $0 + \left(-\dfrac{GMm}{7R}\right) = ½mv^2 + \left(-\dfrac{GMm}{R}\right)$ $v = \sqrt{\dfrac{12GM}{7R}}$
12	**C**	The antenna will have the same speed as the space craft and is still bound in orbit
