

- 1 A ball of mass 58 g collides horizontally with a wall. Fig. 1.1 shows the variation of magnitude of force on the ball  $F$  with time.

**Fig. 1.1**

The initial velocity of the ball is  $34 \text{ m s}^{-1}$  perpendicular to the wall. The ball rebounded with the same speed and also perpendicular to the wall.

- (a) Explain what is impulse on the wall.

.....

.....

..... [1]

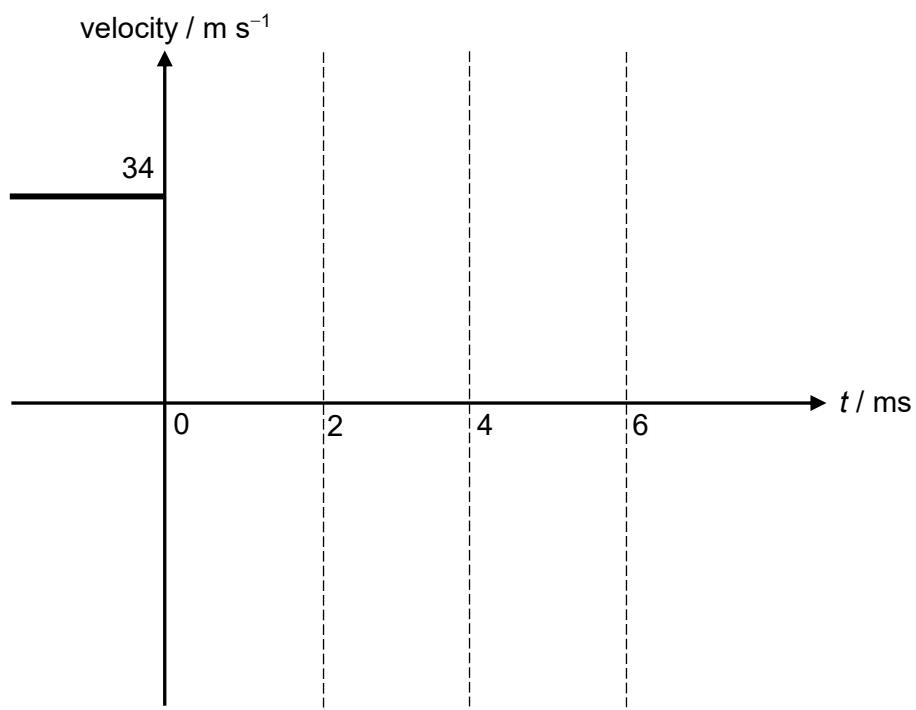

- (b) Calculate the change in momentum of the ball. Take initial direction of the ball to be positive.

$$\text{change in momentum} = \dots \text{kg m s}^{-1} \quad [2]$$

- (c) Hence, use Fig. 1.1 to find  $F_{\max}$  on the ball.

$$F_{\max} = \dots \text{N} \quad [2]$$

- (d) On Fig. 1.2 complete the sketch of the variation of velocity of the ball with time.

**Fig. 1.2**
