

- 29** The diagram shows the first four energy levels of a hydrogen atom.

Which statement is correct?

- A** An electron transition from $n = 4$ to $n = 2$ produces visible light.
- B** An electron of energy 12.0 eV will not be able to excite a hydrogen atom in the ground state.
- C** A hydrogen atom in the -1.5 eV state can emit a photon of energy 0.6 eV in order to arrive at the -0.9 eV state.
- D** An electron transition from $n = 4$ to $n = 1$ produces a photon of a longer wavelength than a transition from $n = 4$ to $n = 2$.
