1   A ball is kicked from horizontal ground towards the top of a vertical wall, as shown in Fig. 1.1.

Fig. 1.1

The horizontal distance between the initial position of the ball and the base of the wall is 24 m. The ball is kicked with an initial velocity *v* at an angle of 28° to the horizontal. The ball hits the top of the wall after a time of 1.5 s. Air resistance may be assumed to be negligible.

(a) Show that the initial vertical component v_Y of the velocity of the ball is 8.5 m s^{-1}.

[2]

(b) Calculate the time taken for the ball to reach its maximum height above the ground.

time = ...s [2]

(c) The ball is kicked at time $t = 0$. On Fig. 1.2, sketch the variation with time t of the vertical component v_Y of the velocity of the ball until it hits the wall. It may be assumed that velocity is positive when in the upwards direction.

Fig. 1.2

[2]

(d) A ball of greater mass is kicked with the same velocity v and at an angle of 28° to the horizontal.

State and explain the effect, if any, of the increased mass on **(b)**. Air resistance is still assumed to be negligible.
