13   If two waves of the same frequency meet in phase at a point, the total energy at that point is proportional to

      A   the sum of the energies of the individual waves.

      B   the difference of the energies of the individual waves.

      C   the sum of the square of the amplitudes of the individual waves.

      D   the square of the sum of the amplitudes of the individual waves.
