12 A planet has an average density 4950 kg m^{-3}. Given that the acceleration of free fall near the surface of the planet is 0.9 g, where g is the acceleration of free fall near Earth's surface, the radius of the planet is approximately

A 260 km   **B** 2500 km   **C** 2800 km   **D** 6400 km
