**28**    In order to produce X-rays of wavelength 0.20 nm, what is the minimum potential difference through which an electron in an X-ray tube must be accelerated to impinge upon the target metal?

**A**. 3.22 kV          **B**. 4.22 kV          **C**. 5.22 kV          **D**. 6.22 kV
