15 A fixed mass of an ideal gas undergoes three different processes as indicated in the figure by the loop PQRP. Process QR occurs at constant temperature.

Which of the following statements may be true?

A Process PQ is a rapid compression.

B The gas at state R is at lower temperature than at state Q.

C There is positive net work done on the gas for the process PQRP.

D There is an increase in internal energy of the gas when it undergoes the process PQRP.
