17 A gas cylinder is fitted with a safety valve which releases a gas when the pressure inside the cylinder reaches 2.0×10^6 Pa. The maximum mass of this gas the cylinder can hold at 10 °C is 15 kg. The gas behaves as an ideal gas.

What would be the maximum mass at 30 °C?

A 5 kg **B** 14 kg **C** 16 kg **D** 45 kg
