2 A rod YW is first balanced on a pivot placed at 1.05 m from the end Y.

A 200 g mass is now tied to the rod by a light string at a distance of 0.10 m from point Y. In order to balance the rod horizontally, the rod is now pivoted at a new position that is 0.27 m to the left of the original position.

What is the mass of the rod?

A 500 g **B** 580 g **C** 700 g **D** 830 g
