

- 10** A simple pendulum consists of a mass of 0.200 kg on a light inextensible string of length 1.20 m. The mass is displaced sideways until it has risen 0.050 m from its equilibrium position and then it is released.

What is the tension in the string as the mass passes through its lowest position?

- A** 0.363 N
- B** 1.80 N
- C** 1.96 N
- D** 2.13 N

11 A moon orbits a planet with a radius R and a period T
