

- 13** The graph shows the variation with time t of the temperature of a solid substance as it is heated at a constant power of 50 W. The mass of the substance is 2.0 kg. It is assumed that heat loss is negligible.

Which statement is true?

- A** The substance is all liquid at $t = 5$ min.
- B** The substance is all gaseous at $t = 15$ min.
- C** The specific latent heat of fusion of the substance is 12 kJ kg^{-1} .
- D** The specific heat capacity of the substance when liquid is greater than that in solid.
