

Therefore, wavelength of the sound wave is 0.54 m.

16

A

Quick way to deduce the direction of the velocity is to sketch the displacement-position graph at this instant and the next instant in time:

Take direction to the right as positive.

R's displacement becomes positive, i.e. moves to the right.
S's displacement becomes negative, i.e. moves to the left.

17

B

$\lambda = 500 \times 10^{-9}$
