

		Δs displacement becomes negative, i.e. moves to the left.
17	B	For image to be resolved, $\theta > \frac{\lambda}{b} = \frac{500 \times 10^{-9}}{25 \times 10^{-3}} = 2.0 \times 10^{-5} \text{ rad}$ Minimum distance = $(9.0) (2.0 \times 10^{-5})$ $= 0.18 \text{ mm}$
18	B	A: Correct Electric field strength has both magnitude and direction
