

- 19** Two equal and opposite charges $+q$ and $-q$ are situated 1.00 m apart.

At a point P, 0.40 m from the charge $+q$, the magnitude of the electric field strength due to the charge $+q$ alone is 12 N C^{-1} .

What is the magnitude of the electric field strength at P due to both charges?

- A** 6.7 N C^{-1}
- B** 8.0 N C^{-1}
- C** 17 N C^{-1}
- D** 20 N C^{-1}

- 20** The resistance of a thermistor decreases significantly as its temperature increases
