

- 24** A current balance device of negligible resistance is set up to determine the magnetic flux density created by a solenoid.

Which change will result in a smaller mass required to balance the device?

- A** the current in the solenoid is increased
- B** the length of wire BC is decreased
- C** the pivots are shifted further away from the solenoid
- D** the number of turns in the solenoid is increased

25 The North pole of a bar magnet is pushed into the end of a coil of wire. The maximum
