

		The power dissipated in the cables is given by $P_R = I^2 R = (10)(6) = 600 \text{ W}$
27	C	$\text{KE} = hf - \phi$ $= 6.63 \times 10^{-34} \left(\frac{3.00 \times 10^8}{370 \times 10^{-9}} \right) - (2.36 \times 1.60 \times 10^{-19})$ $= 1.600 \times 10^{-19} \text{ J}$ $\frac{1}{2}(9.11 \times 10^{-31})v^2 = 1.600 \times 10^{-19}$ $v = 5.93 \times 10^5 \text{ m s}^{-1}$
28	C	$h = 6.63 \times 10^{-34}$
