

		(which is units of work done, and hence that of energy)
2	A	Average of the 6 readings $= \frac{692 + 691 + 692 + 691 + 691 + 692}{6}$ = 691.5 mm Hence, the readings are precise to within 1 mm, but not accurate to within 1 mm of the true length of 695 mm.
2	B	Acceleration is determined from gradient of $v-t$ graph
