

		$u = 2.5 \text{ m s}^{-1}$
6	B	By Principle of Conservation of momentum, $(1.5)(3.0) + (2.0)(0) = (1.5 + 2.0) v$ $v = 1.2857 \text{ m s}^{-1}$ For the 2.0 kg object, $F = \frac{\Delta p}{\Delta t} = \frac{(2.0)(1.2857) - 0}{0.050}$ $= 51 \text{ N}$
7	D	Equation from graph may be expressed as $F = kv$
