		$= 6.3 \times 10^{-3}$ J
11	**C**	$v = \sqrt{gd} = \frac{\lambda}{T}$ $\lambda = T\sqrt{gd} = 0.12\sqrt{9.81 \times 0.30} = 0.206$ m
12	**B**	Twice the intensity implies the amplitude is $\sqrt{2}$ larger.
