		Twice the intensity implies the amplitude is $\sqrt{2}$ larger. Half the frequency implies period is doubled.
13	**A**	$I = I_0^{\,1}\cos^2\theta$ $= (\frac{1}{2} I_0)\cos^2 60°$ $= \frac{1}{8} I_0$
14	**D**	$\sin\theta = \frac{\lambda}{}$
