		$= \frac{1}{8} I_0$
14	**D**	$\sin\theta = \frac{\lambda}{b}$ Since distance between the single slit and the screen is much greater than the slit width, angle is small. $\theta = \frac{\frac{1}{2}x}{D} = \frac{\lambda}{b}$ $x = \frac{2\lambda D}{b}$ $x^1 = \frac{2(2\lambda)D}{\frac{b}{2}}$ $= \frac{8\lambda D}{b}$ $= 4x$
15	**D**	$\sin\theta_1 = \frac{(1)\lambda}{d}$
