		At higher orders, since distance travelled by the light increases, intensity decreases.
16	**C**	$\theta = \frac{\lambda}{b} = \frac{x}{D}$ $x = \frac{\lambda D}{b}$ $= \frac{(500 \times 10^{-9})(200 \times 10^{3})}{35 \times 10^{-2}}$ $= 0.29 \text{ m}$
