		collision.
18	**C**	$\because pV = nRT, \quad p \propto \frac{T}{V}$ (n and R being constant) $\frac{p'}{p} = \left(\frac{T'}{T}\right)\left(\frac{V}{V'}\right)$ $p' = \left(\frac{273.15+25}{273.15+50}\right)\left(\frac{1}{2}\right)\left(1.0\times10^5\right) = 4.6\times10^4$ Pa
19	**B**	Movement along equipotential surface has zero work done. Since path X is closer to Q, W_X will be larger.
