		$p' = \left(\frac{}{273.15+50}\right)\left(\frac{}{2}\right)(1.0\times10^{}) = 4.6\times10^{}$ Pa
19	**B**	Movement along equipotential surface has zero work done. Since path X is closer to Q, W_X will be larger.
20	**D**	Electric field strength at a point is equal to the negative potential gradient at that point.
