		Resistance is the ratio of V/I.
23	**D**	The effective resistance of the 3 resistors in parallel is $\frac{R}{3}$. Therefore, the p.d. across the single resistor is $3 \times 3 = 9$ V. Hence e.m.f of the battery is $3 + 9 = 12$ V.
24	**C**	magnetic force $= BIL\sin\theta$
