		The nebula spectrum contains all the lines of helium and hydrogen. Not all the lines from nitrogen and krypton are present in the nebula spectrum.
30	**A**	For 3 years, $A = A_0 e^{-\lambda t}$ $\frac{1}{3} A_0 = A_0 e^{-\lambda 3}$ $\lambda = \frac{\ln \frac{1}{3}}{-3} = 0.36620 \text{ year}^{-1}$ For 6 years, $A = A_0 e^{-0.36620 \times 6} = 0.11 A_0$
